

Briggs on Comity in Private International Law

The latest volume of Recueil des cours, published by The Hague Academy of International Law, has recently been released. It contains an article by Adrian Briggs from the University of Oxford on “The Principle of Comity in Private International Law”. The abstract reads as follows:

The lectures examine the concept of comity, drawing particular attention to the twin principles of respect for sovereign acts done within the territory of a sovereign, and non-interference with the exercise of that power. They seek to show how rules on jurisdiction, foreign judgments, judicial assistance (and, to a limited extent, choice of law) are derived from and honour the principle of comity; and assess certain new developments in private international law in terms of their compatibility with the principle of comity.
