

Standard of Proof - International Conference - Humboldt Kolleg - Prague, October 26 - 27, 2017

The object of the conference is to inquire into the key question of assessment of proof, namely standard of proof. In general, evaluation of evidence requires an intellectual process, in which the evaluator reconstructs the past based on available information. Since the past cannot be repeated, the evaluator may only attempt to get as close as possible to the reality. Generally, as to the standard of proof we may identify two extreme approaches. First, which we can describe as hypothetical or speculative, stems from the persuasion of the judge. It employs such terms as “truth”, “certainty” or “beyond reasonable doubts”, etc. The result of it is “everything or nothing”. The second approach is, on the first sight, more scientific, since it measures the extent of credibility of the reconstruction by a degree of probability. If, for example, the degree of probability exceeds 51 %, such information is considered as proven. The main purpose of the conference is therefore to learn about different approaches in relevant European jurisdictions. The second purpose of the conference is to assess these different approaches and find an adequate standard. Finally, the conference shall increase the understanding of the matter by the interested public and the participants.

The detailed program of the conference can be found [here](#).
