Global Perspectives on Responsible Artificial Intelligence

In June 2020, the Freiburg Institute for Advanced Studies (FRIAS) held an online symposium dealing with "Global Perspectives on Responsible Artificial Intelligence (AI)". The range of topics included the implications of AI for European private law (Christiane Wendehorst, ELI/University of Vienna), data protection (Boris Paal, Freiburg), corporate law (Jan Lieder, Freiburg), antitrust (Stefan Thomas, Tübingen), and, last but not least, private international law (Jan von Hein, Freiburg). The videos of the presentations are now available here.
