

Frontiers in Civil Justice - book published

The edited volume **Frontiers in Civil Justice: Privatisation, Monetisation and Digitisation** (eds. Xandra Kramer, Jos Hoevenaars, Betül Kas and Eris Themeli) has been published by Elgar.

The book is the third edited volume resulting from the project Building EU Civil Justice, funded by an ERC consolidator grant, at Erasmus School of Law at Erasmus University Rotterdam. Twenty authors from a wide range of countries and with different backgrounds have contributed.

The book studies three interrelated frontiers in civil justice from a European and from national perspectives, combining theory with policy and insights from practice: the interplay between private and public justice, the digitization of justice, and litigation funding. These current topics are viewed against the backdrop of the requirements of effective access to justice and the overall goal of establishing a sustainable civil justice system in Europe.

The combined works take on a pan-European perspective and zoom in on several jurisdictions, thereby providing a holistic exploration of current civil justice debates and frontiers. The book includes chapters dedicated to the interaction between public and private justice (ADR), the digitisation of both private dispute resolution and court litigation, including the rapid development and use of advanced forms of Artificial Intelligence, and the funding of justice, especially collective actions and settlements by means of third party litigation funding and common funds.

More information is available at the publisher's website [here](#). The first Introductory chapter is open access available on the website.
